www.linkedin.com/in/ubaid018
Rawalpindi, Pakistan

Software Engineer with experience in full-stack web development, microservices architecture, cloud infrastructure, and native iOS application development. Skilled in building scalable real-time systems using Node.js, PostgreSQL, Redis, RabbitMQ, and Swift, with hands-on experience deploying production applications and developing mobile solutions.

Skills

Languages: JavaScript (ES6+), TypeScript, Swift, Python, C++
Frontend: React.js, Next.js, Redux, Zustand, TanStack Query, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, WebSockets, JWT/OAuth Authentication
Databases & Storage: PostgreSQL, MongoDB, Redis, MinIO
Architecture & Infrastructure: Microservices, RabbitMQ, HAProxy, Linux/Debian, PostgreSQL Clustering, Real-Time Systems, Active Directory, Docker.
Mobile: Native iOS Development (Swift)

Work Experience

FULL STACK DEVELOPER (Web + iOS) – QuantumRonics **Feb 2026 – Current**

Backend & Infrastructure

- Built backend services and real-time systems for the company's email, collaboration, and cryptocurrency exchange products using Node.js, PostgreSQL, Redis, and RabbitMQ.
- Designed microservices and managed production deployments on Debian VMs with HAProxy load balancing and PostgreSQL clustering.
- Integrated LiveKit for voice and video conferencing.
- Customized the iRedMail/SOGo mail stack and built a custom ReactJS webmail interface.

iOS Development

- Built native iOS applications in Swift for the collaboration platform and a cryptocurrency exchange.
- Integrated REST APIs, authentication, push notifications, and real-time updates; implemented LiveKit audio/video conferencing.

MERN STACK DEVELOPER INTERN – RTechnologies **Nov 2025 – Feb 2026**

- Worked as a core backend developer across multiple client projects, including Hitechie (job portal), Check-in, and Kratos.
- Built a real-time collaborative whiteboard and an admin dashboard with live analytics and role-based access using WebSockets.
- Contributed to the company website: UI/UX improvements, production bug fixes, and frontend performance.
- Participated in code reviews, sprint planning, and deployment workflows.

Projects

ENTERPRISE EMAIL PLATFORM

- Built an enterprise email client comparable to Outlook, Thunderbird, and Gmail by customizing iRedMail and SOGo; replaced the SOGo UI with a custom webmail interface built from scratch in ReactJS.
- Implemented S/MIME encryption, mailbox migration from Zimbra and Microsoft Exchange, Active Directory sync, bulk user creation, and a customized admin portal.
- Tech stack: Python, Objective-C, ReactJS, AngularJS. Core services: Nginx, Postfix, Amavis, ClamAV.

REAL-TIME COLLABORATION PLATFORM (WEB + iOS)

- Built a Slack-like platform supporting workspaces, channels, messaging, file sharing, and real-time communication using Node.js, Express, PostgreSQL, Redis, RabbitMQ, and MinIO.
- Designed a microservices architecture with asynchronous event processing and distributed caching; deployed on Debian VMs with HAProxy load balancing and PostgreSQL clustering.
- Integrated LiveKit for voice and video conferencing, migrating from an earlier MediaSoup implementation.
- Developed the native iOS client in Swift with REST API integration, authentication, push notifications, real-time updates, and LiveKit conferencing.

CRYPTOCURRENCY EXCHANGE iOS APP

- Developed a native iOS application in Swift for a cryptocurrency exchange built on a customized OpenDAX ecosystem.
- Implemented wallet management, trading workflows, authentication, market data visualization, and portfolio tracking.
- Integrated real-time market updates and collaborated with backend engineers on API design and mobile integration.

HITECHIE – JOB PORTAL

- Worked as a core backend developer on a job portal platform at RTechnologies.

CHECK-IN – LOCATION-BASED APP

- Contributed to the backend of a check-in app where users can find other people who checked in at the same place.

KRATOS – LIVE STORY-MODE GAME APP

- Contributed to backend development of a live story-mode game app.

TRAPSHIELD DASHBOARD (FYP)

- Designed and developed a cybersecurity dashboard for my final year project using React.js, Node.js, Express.js, and MongoDB.
- Analyzed real-time network traffic to detect and filter malicious activity.
- Trained three Random Forest models on a custom dataset covering OS Command Injection, SQL Injection, and Cross-Site Scripting attacks.

Education

BACHELOR OF CYBER SECURITY **Sept 2021 – Sept 2025**
Comsats University, Islamabad – Pakistan

Certifications

Ccnav7: Introduction to Networks
Microsoft Office Specialist: Word 2016
